

TREE WRAP

2-PACK

USE AND CARE GUIDE Dimensions: 1.5" Diameter x 24" Length. CAN BE USED ON ANY SIZE TREE.

Featuring a Lightweight, Breathable Design

Usage Instructions:

The Spiral Tree Guard is designed to protect young trees from mechanical damage, pests, and environmental stress while allowing for natural growth. To install, gently wrap the guard around the tree trunk, starting at the base and spiraling upward. Ensure the guard is snug but not tight, leaving enough space for the tree to grow without restriction. The spiral design allows for expansion as the trunk increases in diameter. For best results, position the guard so it extends from just above the root flare to the lowest branches, providing full protection against lawn equipment, wildlife, and harsh weather conditions.

Care and Maintenance:

Regular inspection of the Spiral Tree Guard is recommended, particularly during the growing season. Check for signs of rubbing, constriction, or damage to the tree bark, and adjust the guard as needed to maintain proper clearance. Remove any debris or soil that may collect inside the spiral to prevent moisture buildup and potential fungal growth. The guard can remain in place for several years, but it should be removed once the tree reaches a size where the trunk is no longer at risk or the guard becomes restrictive. Proper care ensures long-lasting protection and promotes healthy, vigorous growth for your young trees.

PROTECTS FROM

- Mowers • Trimmers • Sun Damage • Rodents
