

Universal Car & Motorcycle Brake Pedal

English Product Manual

(Optimized 2-page PDF version | Pages<50 | File Size<20MB)

1. Product Overview

This universal brake pedal is designed for most cars and motorcycles. Adopting high-strength material and non-slip surface design, it improves braking stability, increases foot contact area, prevents slipping, and brings comfortable and safe operation. It is a direct replacement and upgrade part for original brake pedal.

2. Compatibility

Applicable

- All kinds of passenger cars, SUVs, pickup trucks
- Street motorcycles, off-road motorcycles, scooters, ATVs

Feature

Universal mounting size, no cutting or drilling needed, easy installation.

3. Technical Specifications

- Material: High strength aluminum alloy / Reinforced plastic
- Surface: Non-slip grain, anti-rust treatment
- Working temperature: -45°C ~ +120°C
- Installation: Clamp type / Screw fixed
- Characteristic: Wear resistant, anti-slip, high temperature resistant, no deformation

4. Product Features

1. Universal fit for most cars and motorcycles.
2. Non-slip surface avoids foot slip during braking.
3. Enlarged pedal area reduces driving fatigue.
4. High-strength structure, durable and not easy to break.
5. Simple installation, no professional modification required.

5. Installation Instruction

1. Clean the original brake pedal surface to remove dust and oil.
2. Align the new pedal with the original pedal position.
3. Clamp tightly or fasten the fixing screws.

4. Shake slightly to check firmness, ensure no looseness.
5. Test brake stroke to confirm no interference with other parts.

6. Troubleshooting

- Pedal loose: Retighten screws or re-clamp.
- Easy to slip: Clean surface and keep dry.
- Installation interference: Adjust position properly.
- Deformation damage: Replace with new one immediately.

7. Package List

- 1 × Universal Brake Pedal
